PROJECTS

EMOTION ANALYSIS

<https://github.com/rlgaines/emotion-analysis>

Emotion Analysis is an app that allows companies or individuals to record a viewer and get a graphed data visualization of what they were feeling in real time. Anyone can record themselves and have an immediate response of what emotions they were expressing at that time. It has pages for uploading any video for custom results, an advertising page for companies, and a practice page for anyone who wants to practice their public speaking, acting, or interview skills.

Tools: AngularJS, Node, Express, Socket.io, Kairos Emotion Analysis API, Add Pipe Video API, High-charts

FLASHCARD STUDY

<https://github.com/rlgaines/angular-flashcard-study-app>

Flashcard Study is an app that allows users to register, create a profile, and make a deck of flashcards of any study material. Once the deck of flashcards is made they are able to quiz and score themselves. Also, the deck will be shared to all other user's views with the option to add to their own decks for study.

Tools: AngularJS, Node, Express, PostgreSQL, AJAX, OAuth

IMPRINT

<https://github.com/rlgaines/imprint-capsule>

Imprint is a hyperlocal guest book application that allows you to create a new guest book at any location that may be of interest to you. Other users can see where you have gone and written your imprint at, but they cannot write in that guest book unless they are exactly within geolocation of the guest book. This allows users to experience honest impressions of new places and entice them to go explore new guest books.

Tools: Facebook Auth, Google Maps API, Node, Express, PostgreSQL, KnexJS, Heroku
